

Math, Math Everywhere is a segment included in each bi-monthly episode of FACES - Columbus City Schools' Family and Community Engagement Series broadcast program. By showcasing how math is in everything we do - from cooking, to manufacturing, building robots and roller skating - the segment connects students with fun opportunities to learn. More importantly, students and families see real life examples of how what is learned in school is useful to everyday life. This segment targets our students, families, and community, and aims to increase student engagement and involvement with math.
